Data Links

Publicly available National Health Interview Survey (NHIS) data were downloaded from the <u>Integrated Public Use Microdata Series (IPUMS)</u>. Restricted-access NHIS data were obtained via <u>application to the National Center for Health Statistics (NCHS)</u>.

Restricted-access data on detainers issued by Immigration and Customs Enforcement between 2011 and 2018 are provided by Syracuse University's Transactional Access Records Clearinghouse (TRAC). The data were provided to us free of charge as university researchers affiliated with institutions who subscribe to TRAC following an application submitted at the following website: https://trac.syr.edu/fellows/.

Publicly available Google Trends data were downloaded from Google Trends (https://trends.google.com/trends/) and are also available in our replication package.

Replication Package

Detailed information on data and variables, as well as code to replicate our analyses, is available at the following site: https://github.com/aljohnson-soc/deportation-threat/.

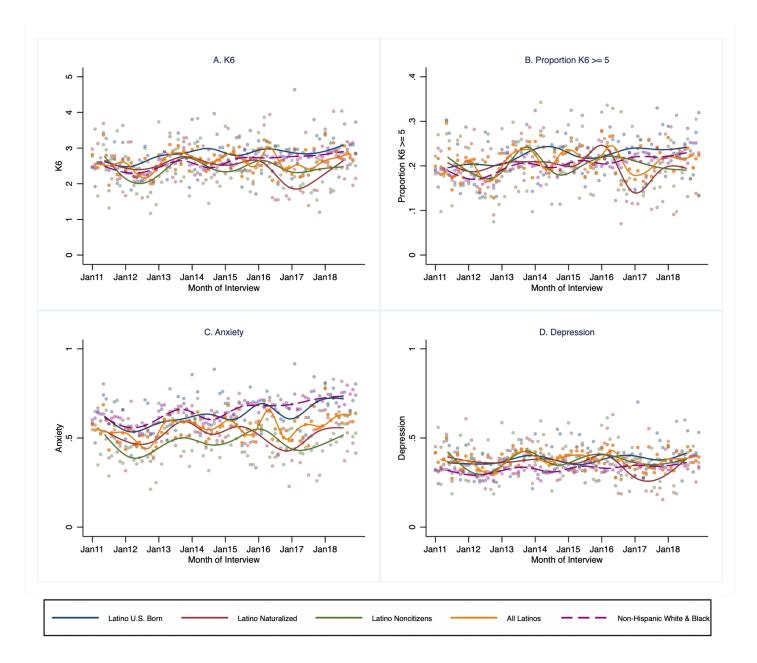

Figure S1. Age-Adjusted Monthly Spline Trends in Psychological Distress for U.S. Latinos by Citizenship and Non-Hispanic Black and White Americans, 2011-2018.

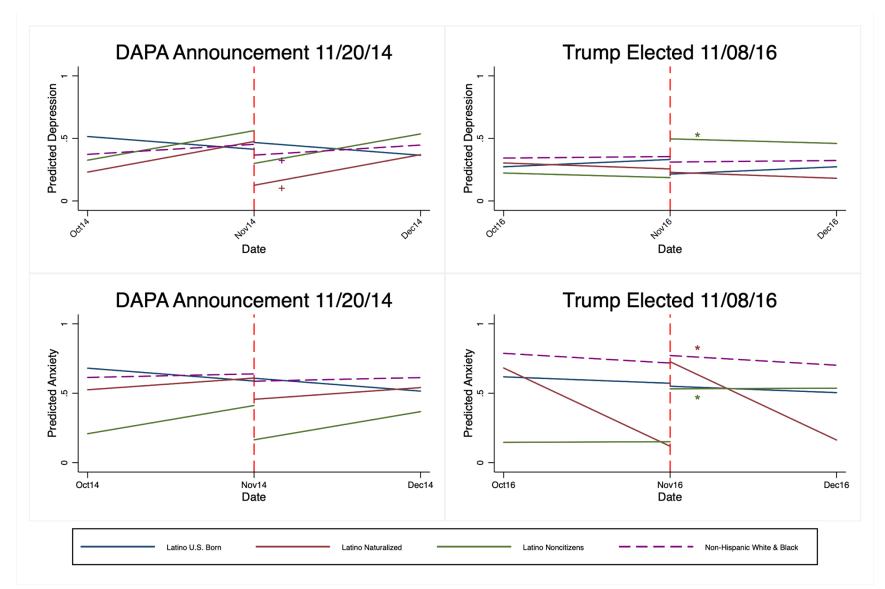

Figure S2. Regression Discontinuity of Depressive and Anxious Symptoms for U.S. Latinos Following Selected Dramatic Societal Events, by Citizenship

Note: + P < 0.1 *P < .05 **P < .01 ***P < .001 P-values indicate a significant change in outcome at the time of event. Models compare linear trends 30 days pre- and post-event. Psychological distress is measured using the K6 index, which varies between 0 and 24. Severe psychological distress indicates the proportion of individuals with a K6 score >= 5. Anxiety and depression are measured using the K6 index. Anxiety averages nervousness and restlessness on a scale from 0 to 4; depression averages sadness, worthlessness, hopelessness, and the feeling that everything is an effort on a scale from 0 to 4.

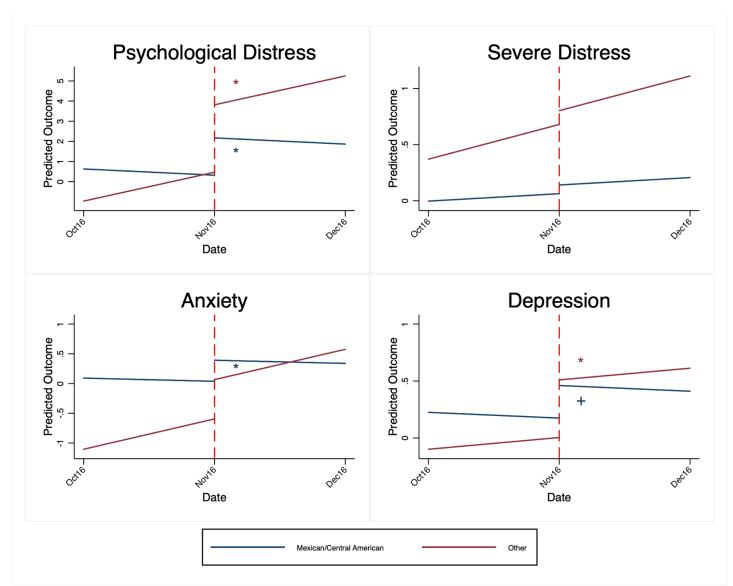

Figure S3. Regression Discontinuity of Psychological Distress Following the 2016 U.S. Presidential Election for Latino Noncitizens, by Ethnic Origins

Note: + P < 0.1 *P < .05 **P < .01 ***P < .01 ***P < .001 P-values indicate a significant change in outcome at the time of event. Models compare linear trends 30 days pre- and post-event. Psychological distress is measured using the K6 index, which varies between 0 and 24. Severe psychological distress indicates the proportion of individuals with a K6 score <math>>= 5. Anxiety and depression are measured using the K6 index. Anxiety averages nervousness and restlessness on a scale from 0 to 4; depression averages sadness, worthlessness, hopelessness, and the feeling that everything is an effort on a scale from 0 to 4.

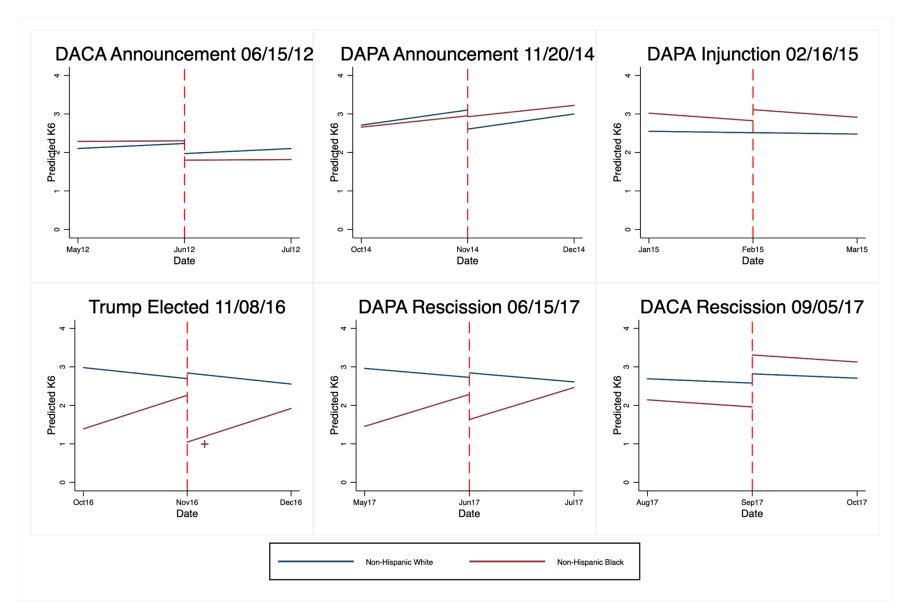

Figure S4. Regression Discontinuity of Psychological Distress for Non-Hispanic Black and Non-Hispanic White Americans Following Six Dramatic Societal Events

Note: *P < .05 **P < .01 ***P < .001 P-values indicate a significant change in outcome at the time of event. Models compare linear trends 30 days pre- and post-event. Psychological distress is measured using the K6 index, which varies between 0 and 24 with higher scores indicating greater distress.

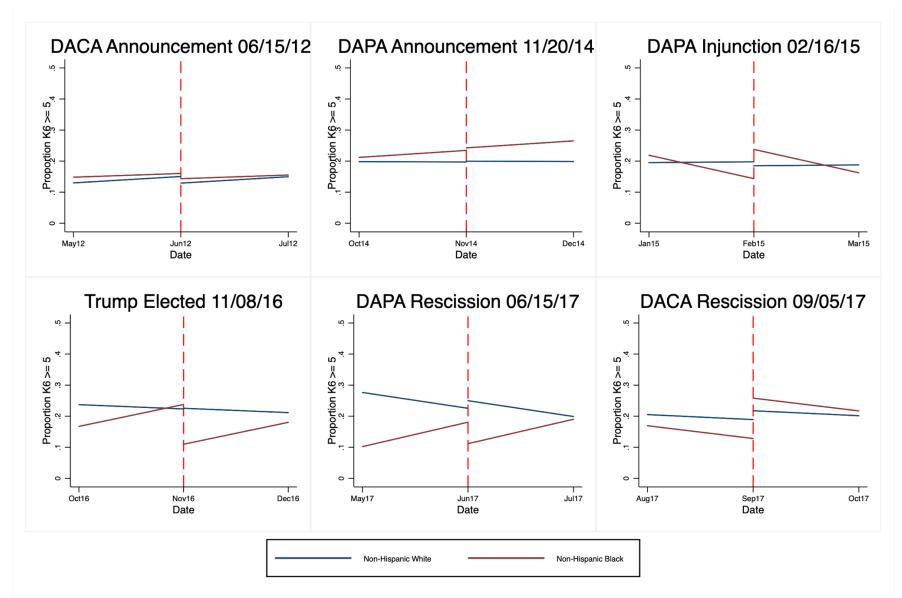

Figure S5. Regression Discontinuity of Moderate or Severe Psychological Distress for Non-Hispanic Black and Non-Hispanic White Americans Following Six Dramatic Societal Events

Note: *P < .05 **P < .01 ***P < .001 P-values indicate a significant change in outcome at the time of event. Models compare linear trends 30 days pre- and post-event. Severe psychological distress indicates a K6 score >= 5.

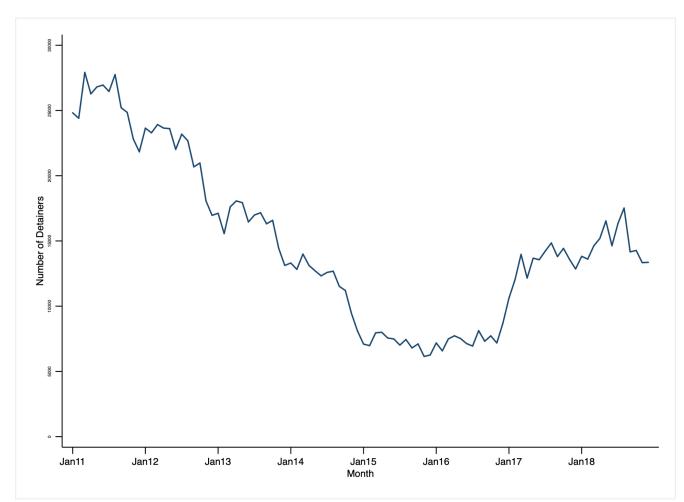

Figure S6. Monthly Number of Detainers Issued by Immigration and Customs Enforcement, 2011-2018 Source: TRAC at Syracuse University

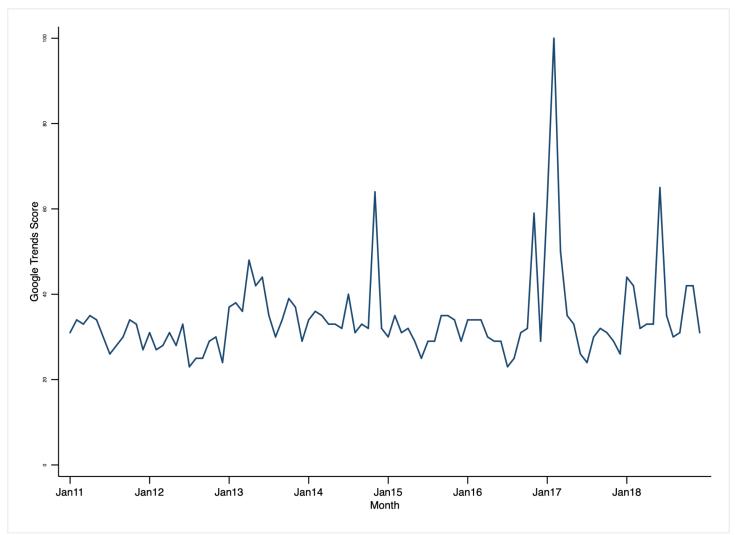

Figure S7. Monthly Google Trends Score for "Immigration" Topic, 2011-2018 Source: Google Trends, 2011-2018.

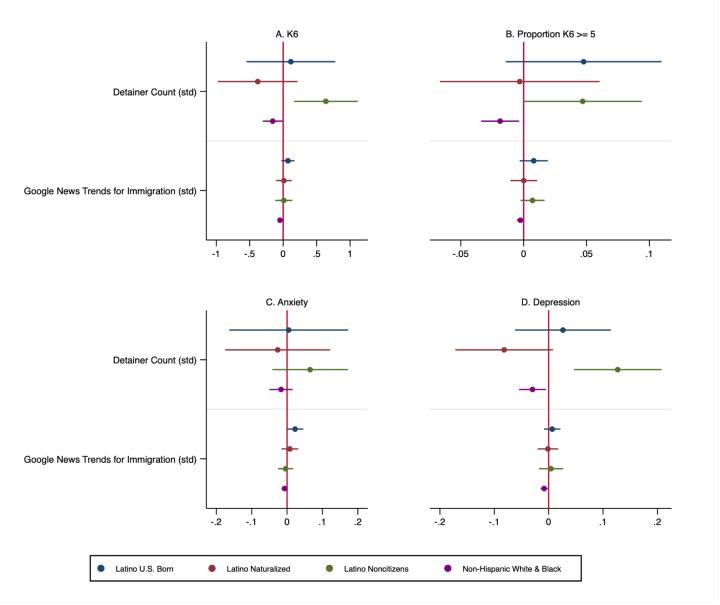

Figure S8. Regression of Psychological Distress on ICE Detainers and Google News Trends Score for "Immigration" Topic for U.S. Latinos by Citizenship and Non-Hispanic Black and White Americans, 2011-2018

Note: 95% confidence intervals produced with robust standard errors clustered at the month-year level. Models include controls for gender, age, employment status, household income, parenthood, marital status, education, census region of residence, and interview language, year fixed effects, and month fixed effects.

Table S1. Counts and Percentages of Latino Adults (Age 18+) with Undocumented Household Members, by Citizenship and Legal Status

		Number with One or More Undocumented Household	Undocumented Household
All Latino U.S. Citizens	26,588,511	Members 1,714,895	
U.Sborn Citizens	19,981,921	1,194,916	
Naturalized citizens	6,606,590	519,979	7.87%
All Latino Noncitizens	12,734,699	5,754,273	45.2%
Noncitizens (Except Undocumented)	5,622,373	1,678,424	29.9%
Undocumented	7,112,326	4,075,849	57.3%

Source: USC Equity Research Institute analysis of 2017 five-year American Community Survey (ACS) microdata from IPUMS-USA. For a detailed description of the methodology used, see: https://dornsife.usc.edu/eri/publications/eligible-to-naturalize/. The authors thank Justin Scoggins and Carolina Otero for analyzing the ACS data.

Note: Figures should be regarded as estimates, subject to sampling and non-sampling error. Families are defined as two or more people who are related (by blood, marriage, adoption, etc.) and who live in the same household. Counts of people with at least one undocumented household member are exclusive of the focal individual.

Note: *P < .05 **P < .01. P-values are from equal-variance t-tests comparing outcome means pre- and post-event. Standard errors in parentheses. The K6 index ranges from 0 to 24. Results are weighted using Sample Adult weights adjusted for pooled survey years. Empty cells were suppressed by NCHS due to having n < 5. For U.S.-born Latinos and Non-Hispanic White & Black, years lived in U.S. is equal to age.

Note: *P < .05 **P < .01. P-values are from equal-variance t-tests comparing outcome means preand post-event. Standard errors in parentheses. The K6 index ranges from 0 to 24. Results are weighted using Sample Adult weights adjusted for pooled survey years. Empty cells were suppressed by NCHS due to having n < 5.

Note: + P < 0.1 *P < .05 **P < .01; Standard errors in parentheses. P-values indicate a significant change in outcome at the time of event. Models compare linear trends 30 days pre- and post-event. Psychological distress is measured using the K6 index, which varies between 0 and 24 with higher scores indicating greater distress. Models include controls for years in US and interview language (1 = interview conducted in English).
